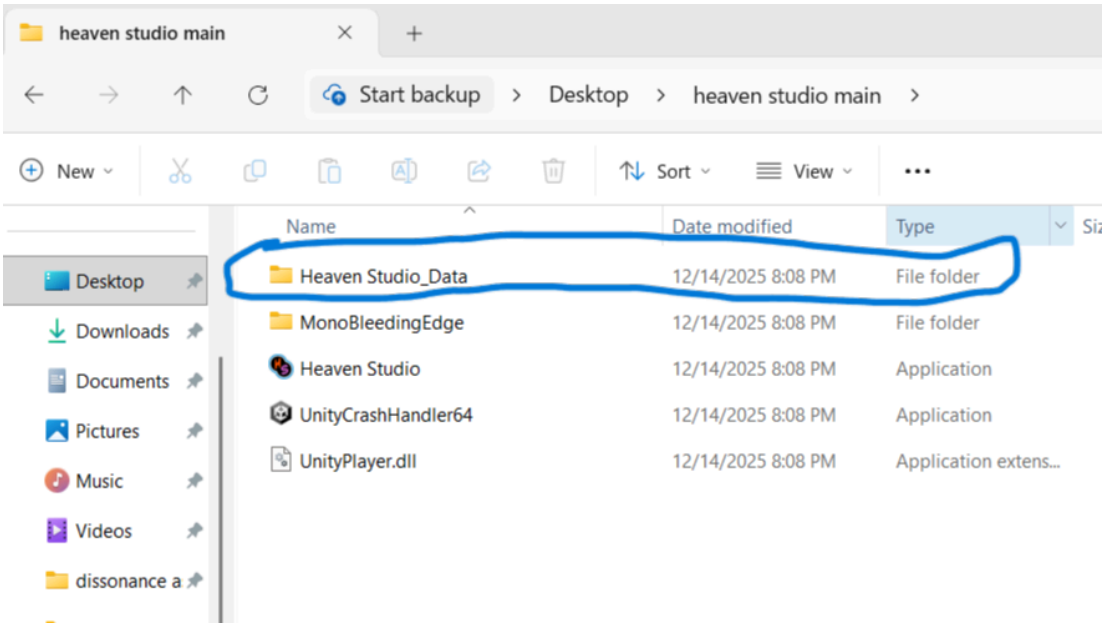
Prerequisites:

- Please have the latest version of Heaven Studio installed. The link to download Heaven Studio can be found by searching for the Heaven Studio Discord or through this video.
- Download whatever texture files you need for your respective remix

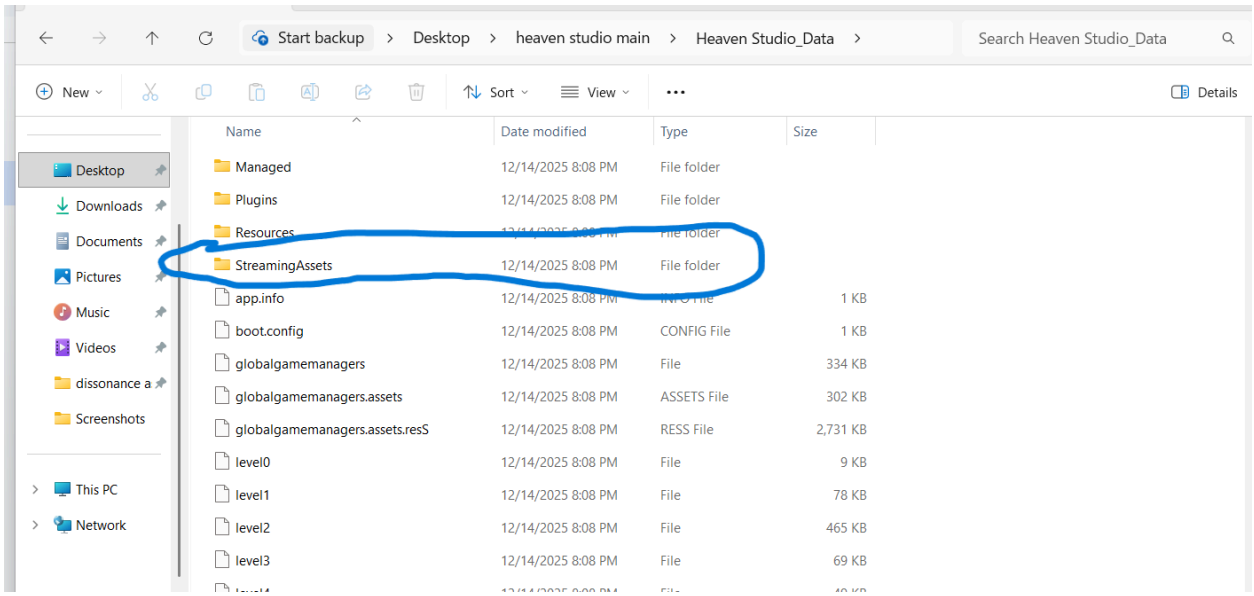
Step 1:

- Once you have downloaded the custom texture files go into the Heaven Studio Folder and open up Heaven Studio_Data

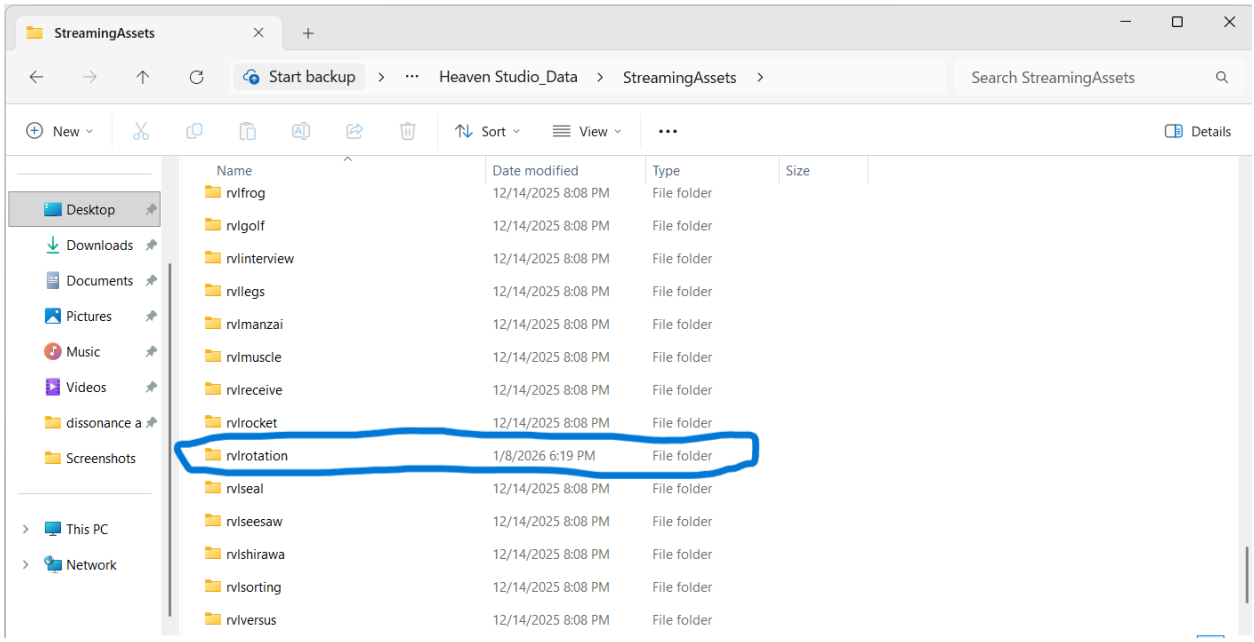


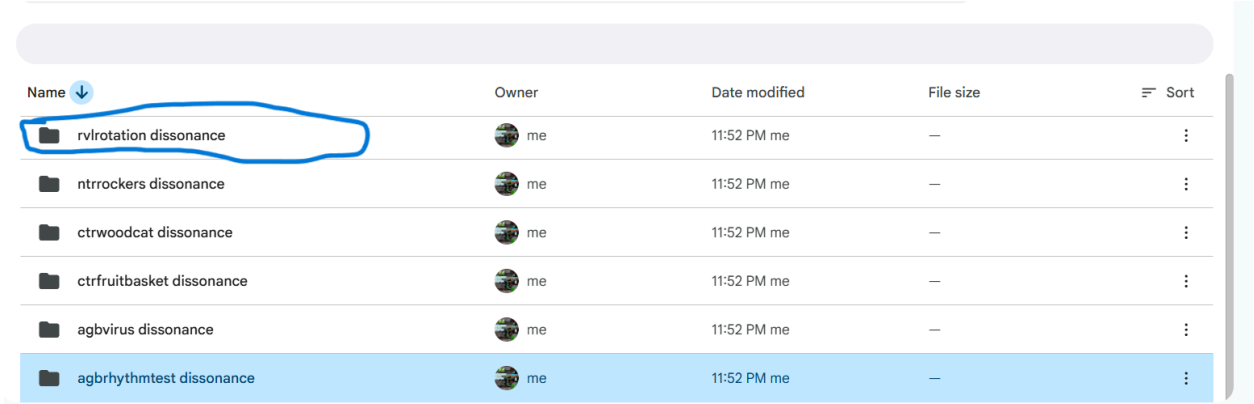
- Look for the folder labeled “StreamingAssets” this is where the data for each of the game’s textures are stored. It is advised to keep a back up of

these files so you can revert back to the standard heaven studio textures



- Find the folders in the StreamingAssets folder that share the same name as the folders for the custom textures.





- Replace the textures in the original folder with the texture files from the new texture files you just downloaded
- Repeat for each game
- After applying all textures open the .riq file in heaven studio to check if everything looks right
